

Valentina Noviello

ABE Italy Lab Technician

valentina.noviello@live.it

I hold a Master's Degree in Biology, conferred in 2014, completed with an experimental dissertation in Biochemistry developed in collaboration with the Zoological Station of Naples. Following the successful completion of the national examination for the teaching profession, I have been serving as a tenured teacher of Mathematics and Science at the lower secondary level.

Since 2018, I have been engaged in the Amgen Biotech Experience (ABE) program in Italy, within which I oversee the preparation, quality control, and distribution of biochemical reagents for participating schools. In this capacity, I also design, coordinate, and deliver national teacher-training initiatives, and provide specialised technical and pedagogical support during laboratory-based activities.

My professional and academic interests are principally directed toward the integration of biotechnology into science education through experiential, inquiry-driven approaches. I am deeply committed to advancing scientific literacy and to fostering in students a rigorous, curious, and critically informed engagement with the life sciences
